Irresystable Wood

What could ever be better than wood? Well, we are introducing a top quality material that looks and feels like wood but is not. It is called Resysta. This material is an innovative solution *par excellence*. And it has just landed on the shores of the Caribbean for the very first time.

Resysta furniture has the visual allure and luxury feel of wood, but not a single tree is felled during the production of this range of luxury outdoor furniture.

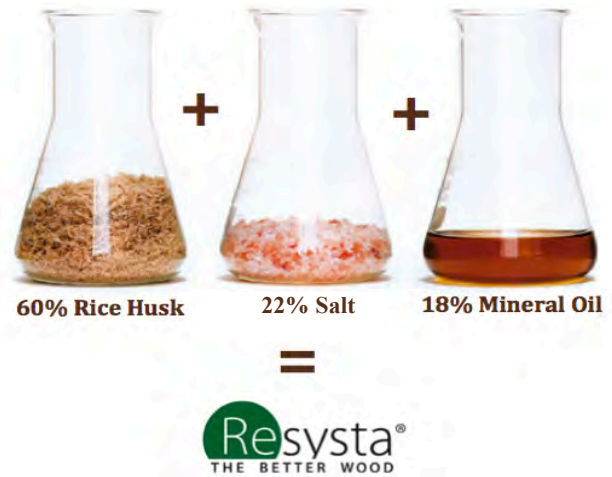

100% Future Proof

Using today's waste, Resysta is an innovative product of the future. The recipe for Resysta has shocked many the world over. A handful of rice husk, a few pinches of salt and a drizzle of mineral oil is all that goes into making Resysta. These ingredients not only create a product that is environmentally friendly but one that could withstand any technical test as well.

- ▶ Resysta can withstand the harsh effects of the sun, sea blast, salt water, rain, or even snow.
- ▶ Resysta's low maintenance and minimal care requirements is also easy on your pocket.
- ▶ We are so confident with the properties of this innovative material that our products come with a 10 year warranty.

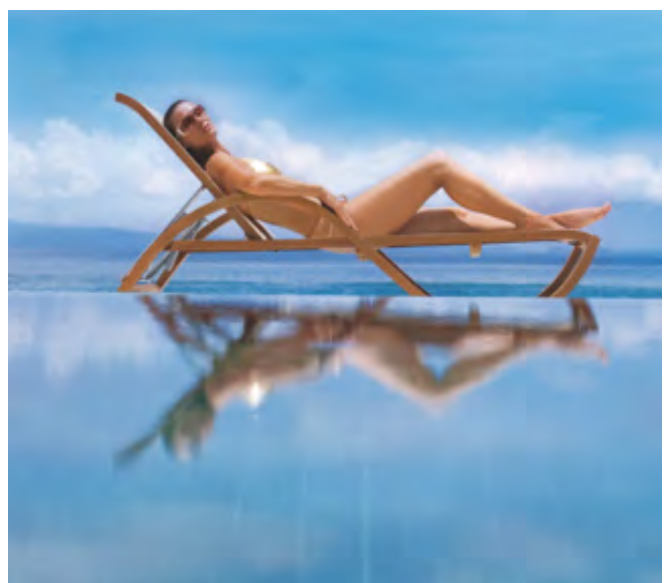

And its durability and sustainability creates opportunities for unlimited design possibilities and applications for both your indoor and outdoor needs. The use of Resysta could have a positive impact on deforestation and the environment.

Dare to be Elegant

Resysta furniture lines are characterised by modern elegance, durability and innovative design. From ergonomically designed lounge chairs to comfortable dining solutions, Resysta offers a number of designs to suit every outdoor area and need.

Sustainable Outdoor Living

Being Sustainable is a line of outdoor furniture that is made from durable recycled plastic milk bottles. The furniture is tough enough to take anything the elements throw at it and it is virtually maintenance-free. The furniture is comfortable and stylish with a contemporary Caribbean design making it perfectly suitable for any setting. Being Sustainable is a range of intelligent and sustainable solutions for indoor, outdoor, decor and construction needs – products with attitude, elegance and design; products that do not cost the earth.

The Being Sustainable line of outdoor furniture is made from recycled high-density polyethylene (HDPE). The material looks and feels like wood but it is not. Because of this the line offers numerous advantages over furniture made of rattan, wood and even metal. It won't rust, rot, gather mould or mildew, or succumb to the effects of sea blast or UV degradation.

Our aim is to help customers (hotels, restaurants, villas, residences, etc.) to create elegant outdoor leisure spaces that will both help them to save Planet Earth and save money and maintenance costs in the long term. We want our clients to enjoy the elegant outdoor spaces, stay longer and spend more time with family and friends.

Our unique brand of furniture can be left outside all year. Our furniture has proven to be impervious to the effects of the weather. We guarantee that the furniture will meet the highest standards of quality and environmental sustainability. Even better, with design and production in Trinidad and Tobago, this high quality product cannot be bought cheaper elsewhere.

The products are designed right in Trinidad and Tobago by a local architect/designer to create elegant designs with a local flair.

A wide range of colours to choose from

Features and Benefits

- ▶ **Extremely durable** – Recycled plastic lumber has an expected life expectancy of at least five times that of timber alternatives, with little or no visible wear
- ▶ **Rot and algae proof** – Very little maintenance is required and no painting nor preservatives need to be applied
- ▶ **Termite Proof** – Recycled plastic lumber is impervious to attacks by wood-eating insects such as termites
- ▶ **Low Maintenance Cost** – There are significant savings in labour and other costs due to reduced maintenance. Also no sanding, treating, staining or varnishing required. Consider that 25% of the cost of wooden furniture constitutes maintenance (sanding, treating, staining, varnishing, polishing, etc.).
- ▶ **UV resistant** – There has been little or no colour loss or sunlight damage recorded on products
- ▶ **Non slip** – The surface texture created in the manufacturing process produces a low slip risk surface

We love trees.

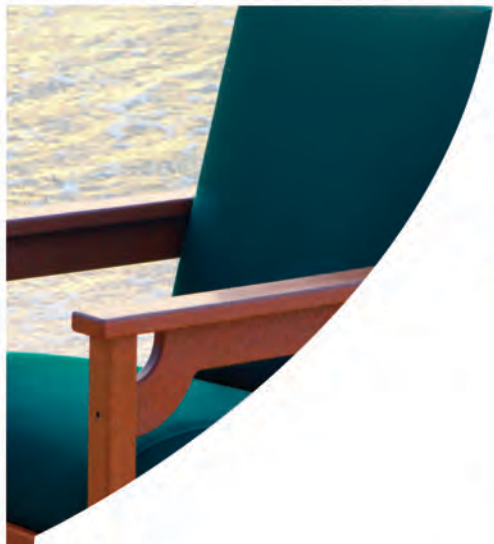

That's why not a single one has been cut down to make our furniture.

The Being Sustainable line of outdoor furniture is made from durable recycled plastic milk bottles. It's tough enough to take anything the elements can throw at it and it's virtually maintenance-free.

You'll find our loungers, club chairs, Adirondack chairs, love seats and sofas so comfortable you won't want to move. And their stylish, contemporary design makes them perfectly suited for any setting.

With furniture from Being Sustainable, you and your guests will want to sit outdoors all the time. And that's the way it should be in the Caribbean.
